JOURNAL: GEO

TITLE: I HAVE ENCOUNTER THE LIVING FOSSIL: ACHIEVEMENT WORLD-WIDE AND NEW MYSTERIES.

CAPTION: Each searchlight to light "GEO" to surprise more of an fisherman in ??? under to them dug-out canoe of the Expedition Hans Fricke is at left, the co-pilot Jurgen Schauer at right. Two biologists the accompanying: The Marseillais Raphael Plante (opposite iin height) and the student ??? Olof Reinicke (In lower part bottom). The great exposed permit by the dive of submarine of locomotion of coelacanth "alternate and synchronize:, It itself to connect more at that of the quadruped how at this of the fishes. Report within the celebrate scientific magazine "Nature", then by our American colleague "National Geographic", the scientific adventure of Hans Fricke itsel pursuit todays with of new middle, In effect, Hans Fricke conduit actually in Spain and at Portugal an inquiry ethnographic, with the assistance of Reverend Pere Valerde, curator of Diocesain Museum of Bilbao, and of an collector of goldsmith of San Sebastian. The point of departure of this search at being the coelacanth of silver to buy by the biologist Maurice Steinert at an antique-dealer of Tolede. That to appear when this sculpture hollow ??? and ex-voto an present ??? to an church for an disire of this when the object, previous at the discovery of "living fossil" in 1938, represent apparently with precision one other specie of coelacanth, But since when Hans Fricke to present ones reporting at the television Allemande, an business in fishes rare to him at to point out credit an photo of coelacanth with an review Portuguse, not to be found since. The afterwards two appeal telephones to converge, going the one to emanate of an chemist south-american, to him have report the presence of an coelacanth on an bargain to fishes within one of the Islands Baleares. Of other species of living fossils dwelling - this then again within of others biotopes of the Mediterranee or of the Atlantic Ocean? Before of there to cast an submarine "Geo" Hans Fricke to conduct the to investigate: After each, this not has been not the first case of the observation common on hearing to precede the science. - RAPHAEL PLANTE.

HANS FRICKE ARTICLE: - Who himself to ask the evolutionists of tomorrow within the same time, our desire also determine

probabilities of survive of an coelacanth which has
then recompressed, like an dive stage for an accident of
decompression. Today again, our friend dives of the COmores
himself yours upon the foot of war with an cage to immerse at 80
meters, just in face of the mansion of coelacanth. Of the how
people to their to signal an new fossil to wriggle at end of an
offpsring, they the capitol within the cage for the redescend at
200 meters of the sort, people to not verifier itself they to
recover good its eggs enclosed within the abdomen of the femal
this ancient four foot order not to cease ever of our to rest of
the questions. By example, an ??? todays how they is ovovivipare,
it is at speech when the eggs enclosed with the abdomen same of
the female, whom ??? bottom after of the small each forms, at to
manner of the mother shark, of the viper and...of the mammiferes!
Meanwhile, void not ??? again at who resembling his affection
Finally, the more fascinating mystery dwelling on the eventually
existence of other coelacanths in of other region submarine. Why
not in to discover when on the slopes of the Comores? Of 1976,
the anatomist Francasi Anthony report within one register
thrilling, "THE HUNT TO COELACANTH". Unfortunately exhausted, the
extraordinary discovery of Maurice Steinert. Today biologist
molecular of Bruselles, the latter myself at recently the
magnificant coelacanth of silver length of 35 centimeters how
they had to buy in 1965 with an Spanish antique-dealer. Each to
indicate when this fish at being manufactured at north of the
Spain before the beginning of this century, then good before the
discovery of Miss Latimer. Of or the artist ??? they data the
model how they to if accurately reproduce?

Twenty years after my first dive in diving suit, grace at
submarine "GEO" I have ??? finally to assist at nocturnal
activity of coelacanth. For the to see to develope counterpart
the day they fault to dive at top of 200 meters, limit actually
of our machine. Another sphere is in construction, whom to permit
of descend to 600 meters. Which ??? at which short story wonders
this we point to have? -END-
